

## NEW ELIET TRUCKLOADER TL 450 PRO

With this new TL 450 PRO, ELIET broadens its range of suction devices that can be loaded onto the trailer of a truck - the so-called Truck Loaders. This new and powerful Truck Loader meets the requirements of customers who are looking for a budget-friendly alternative.

And yet, the TL 450 PRO is a true professional. Below are some of its distinguishing features:

1. The suction turbine with large diameter (450 mm) guarantees considerable suction capacity. In addition, both the suction hose and the discharge pipe have a 200 mm diameter, ensuring easy pass-through of the vacuumed material and practically excluding blockage.
2. The cover on the suction turbine can be replaced in case of wear.
3. The suction turbine is lined with rubber to dampen the thumping sound made by the vacuumed material.
4. The specially designed paddles of the ventilator add to the silent operation of the suction device.
5. ELIET purposely chose to separate the petrol engine from the suction turbine. Because it is fully anchored in the carrier frame, the power traction on the turbine does not affect the engine.
6. The propeller is attached to the crankshaft by means of a conical drill socket, making for easy dismounting.
7. The blow chute can be rotated 360° and locked in any position.

8. The blow chute is made of stainless steel for higher durability. The deflector valve is easily adjustable so as to be able to determine the blowing direction.
9. The highly flexible suction hose measures 3.5 metres and is transparent. The suction mouth rests on a swivel caster, making it unnecessary to hold it up constantly.
10. Alternatively, one can opt for an "Easyhandle™": a suction mouth with two swivel casters and a moveable seat, providing the operator with even greater comfort.
11. A support arm at 1.5 metres on the suction hose prevents it from dragging on the surface, eliminating any corresponding wear.
12. Two sturdy grips enable two people to lift the machine and hook it onto the truck.
13. The supports by which the machine is attached to the truck have adjustable feet with rubber soles.
14. The frame sits on two wheels that provide for easy manoeuvring and easy storage.

The ELIET TL450PRO is available in four different models:

MA 027 010 208	TL 450 PRO	9 HP Honda GX270
MA 027 010 209	TL 450 PRO	13 HP Honda GX390
MA 027 010 113	TL 450 PRO	18 HP Vanguard (electrical start)
MA 027 010 117	TL 450 PRO	23 HP Vanguard (electrical start)
