

Cameleon M 360—Model 2009

Cameleon M 450—Model 2011

1. Two front wheels for better steering, loading and more stability.
2. The Cameleon is now available with 450mm turbine and 9HP engine for higher vacuum performance
3. The 700L debris container is now sliding on small wheels for smooth emptying
4. The top cover of the debris container is densely woven tissue for better dust filtering
5. The standard hopper has the caster wheel at the backside for less obstruction, and better access in corners
6. Redesigned brake activation system, for increased reliability and less maintenance
7. Cameleon is now equipped for connection of pull bar to hook the machine behind a garden tractor
